TECH STACK

Backend & APIs

- Python (Django, DRF)
- Java
- RESTful Architecture
- Neon PostgreSQL
- MySQL
- SQLite

Frontend & UI

- React
- JavaScript (ES6+)
- HTML5 / CSS3
- Modern UI/UX

Desktop Engineering

- JavaFX (Pure Java)
- PyQt5 / PySide
- Native System APIs

DevOps & Environment

- Linux (Ubuntu/Kali)
- Docker
- Git & GitHub
- Render, Vercel, Netlify

Exploration

- Kotlin (Jetpack Compose)
- Bash Scripting
- API Integrations

01 About

I am a Computer Science student and software engineer driven by building practical, high-impact systems that solve real-world operational problems. My core focus lies in building secure, end-to-end applications across full-stack web, native desktop architectures, and system-level workflows. I prioritize clean architecture, performant code, and intuitive user experiences.

02 Featured Projects

ShuleBase

Multi-Platform School Management Ecosystem (Kenyan CBC framework)

Comprehensive educational management platform built across three distinct architecture paradigms to cater to varied deployment scenarios:

Web Edition *- React + Django REST Framework*

- Responsive role-based dashboards for Administrators, Teachers, Students, and Parents
- Real-time fee tracking, automated CBC rubric grading, attendance monitoring, dynamic reporting
- Deployed with scalable cloud hosting and decoupled REST API endpoints

JavaFX Desktop Edition *- Pure Java*

- Offline-capable, standalone desktop client without FXML dependencies for maximum performance and explicit UI control
- Local/remote database synchronization with relational data modeling

PyQt5 Desktop Edition *- Python*

- Rapid, robust desktop variant with rich data tables
- Automated PDF report generation with a lightweight system footprint

DataPilot

AI-Assisted Data Entry & Workflow Automation Assistant

A hybrid productivity web application combining a React frontend with a Django backend, designed for intelligent data extraction, cleaning, and structured data entry pipelines.
